

Integrated Security Solutions

- Intercom Systems
 - Security Intercom
 - Emergency Intercom
 - Parking Intercom
 - Medical Intercom
 - Airport Intercom
- Biometric Systems
- Perimeter Security

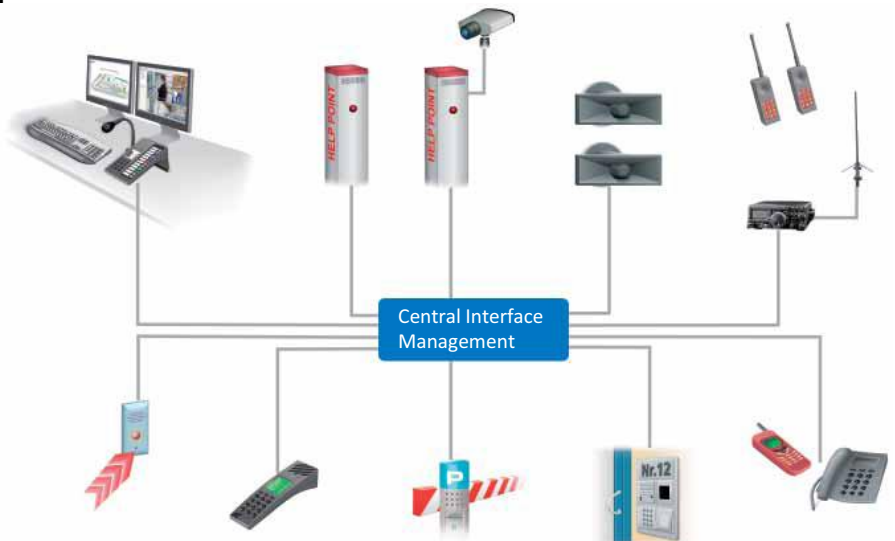

SECURITY INTERCOM

Security Intercom connects security staff with the areas they protect ensuring security for people, buildings and property.

Digital Security Intercom solutions not only offer speaking and hearing. They can do more: automatic calls, camera switching and door control or other options on specific events give you heightened security by giving a real 3D picture and help improve your security decisions.

Unique security concept includes all Intercom functionalities, VoIP® (Intercom over IP), remote site networking as well as integration of various auxiliary equipment like mobile radio or telephones and PA systems.

EMERGENCY INTERCOM

Emergency Intercom supports task forces via a networked internal command and communication system – and helps save property and lives.

Fire brigades, paramedic services and police forces must guarantee the success of their actions through reliable alerting and optimal co-ordination even under enormous pressure: crews and equipment must be ready for action at all times and regular operations need to be easy and smooth.

This requires secure, reliable and quick information and communication under difficult conditions to support immediate and sure-footed responses by emergency teams.

PARKING INTERCOM

Parking Intercom is a platform for communication and security, that focuses on the people and their requirements.

In this way you can provide your customers with 24 hour availability, quick support and convenience for smooth workflows.

A central control desk, networking of numerous locations of various sizes and simple integration of external systems enables flexible and economic human resource allocation resulting in maximum efficiency and optimised return on investment.

MEDICAL INTERCOM

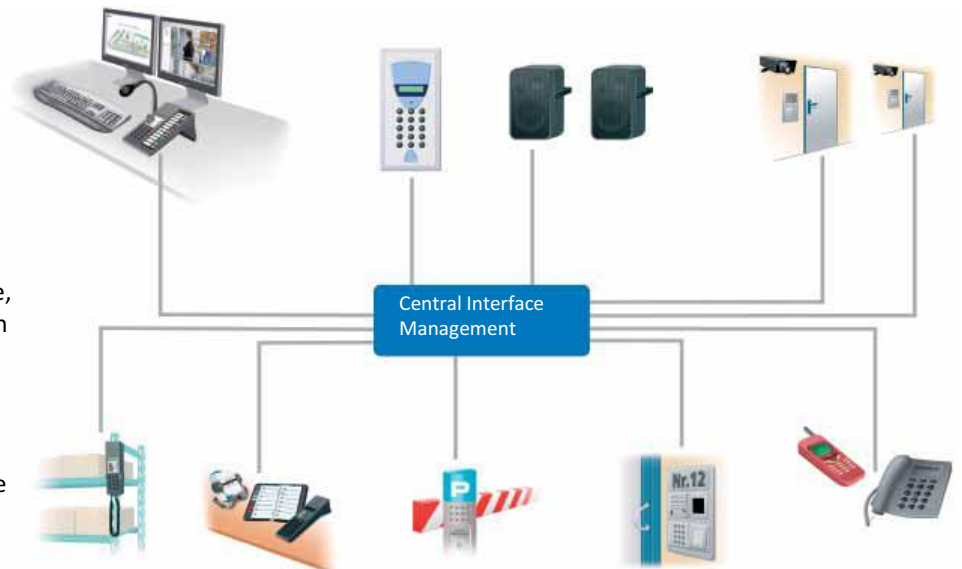

In the medical sector, minutes can be decisive in terms of life and death. Especially in emergency rooms and operating areas, communication media must meet certain standards to avoid endangering patients' lives. Intercom systems meet the highest criteria within the medical sector, whilst also providing quick and comprehensible communication in laboratories, blood banks and patient rooms.

- Disinfectable Intercom stations for treatment rooms and operating areas
- Access controls for restricted areas, such as intensive care, nurseries and operating theatres
- Internal operating and ward communication in association with nurse call systems
- Two-way radio integration for handsfree communication between rescue forces and emergency rooms
- Integration of public address systems

Medical Intercom supports doctors and nurses via a uniform communication platform enabling more efficient patient care.

Patients in hospitals, clinics, homes and doctors' surgeries require optimal care and medical support. Sure and speedy responses allow full concentration on treatment and care, enabling effective recovery and often the saving of lives.

This requires the secure flow of information and communication between all parties and all sectors enabling medical staff to concentrate on the needs of the patient.

Hospitals, retirement and care homes

High degree of integration. Rapid response; monitoring and control of all integrated signal and alarm facilities, graphic representation of the entire system. Additional integration of calls to nurses and emergency teams, as well as hierarchical operation networks:

1. **Central control stations** for voice message distribution and situation management via porters' lodges and bases.
2. **Custom designed intercoms** for doors, gates, working areas – robust and easy to operate.
3. **Chemical proof and disinfected intercoms for operating theatres** and laboratories.
4. **Integration of facility management** technology, door and gate operation, access areas and car park services.
5. **Integration of emergency call systems, e.g. lift emergency.**
6. **Counter intercoms for outpatient** care and emergency departments.
7. **Redirection and forwarding of calls onto pagers, DECT and** mobile phones.
8. **Video integration – automatic camera hook-up.**
9. **Audio Monitoring and control of** all intensive care stations.
10. Integration of **nurse call systems.**
11. **Digital Networking for the Integration** of external stations; link up remote buildings to form intercom networks of whatever size; Networks via IP, 2-cable, ISDN or fibre optic cable.

For Patients, Doctors, Nurses and Care Staff

- Clear and speedy assistance
- Reassuringly excellent voice reproduction avoids misunderstandings
- Hands-free communication upholds the hygiene chain
- Interruption-free communication
- Complete signal reception ensures communication in the entire complex
- Overview integration of visual display technology
- Calming background music in waiting areas

AIRPORT INTERCOM

The organization at the airport is only smooth if communication works perfectly. Schneider Intercom supports the hectic, multi-faceted life of an airport in an undetectable, yet efficient way.

- Individual information and help points as well as special Intercom stations for people with disabilities (mobility, hearing or sight problems).
- Complex Intercom solutions for entries and exits with CCTV integration.
- Intercom for personel gates.
- Operating communication for gates, check-in, baggage handling, catering companies etc.
- Integration of Parking and Lift Intercom.
- Silent alarm at control points, such as safety gates and check-in desks.

INDUSTRIAL INTERCOM

Communication systems used in industrial areas work under extreme conditions. Optimal speech communication in sectors such as heavy industry, road-building and industrial parks are some of the areas where Schneider Intercom's individual concepts can save time and money.

- Flawless speech connections under difficult environmental conditions (damp, noise, dirt and explosive).
- Connection of two-way radio for plant security and service technicians.
- Integration of telecom systems (wired or mobile such as GSM or DECT).
- Special conference functions for party-lines.
- Optimal networking for extensive company areas, operating stations and other locations.

IR Simultaneous Interpretation System

As the central element of the system, the infrared transmitter interfaces with either analog or digital conference system, connects interpreter consoles and infrared radiators which transmit audio signals to wireless multi-channel receivers for the delegates to hear the language of their choice via personal earphones.

Typical Applications

- ★ Convention centres
- ★ Parliament chambers
- ★ Courtrooms
- ★ Boardrooms
- ★ Council chambers
- ★ Classrooms
- ★ Auditoriums
- ★ Theatres
- ★ Houses of Worship

Meeting Room Equipment

As table or monitor, function follows form. And form and function should change along with your needs. It's a simple idea but its genius lies.

In the details: rotatable, closable, vertically adaptable. Incorporate all of your complex demands into one comprehensive plan: for space in which people can meet and communicate effectively; for intuitive technology that speeds up and ably supports the decision making process; for selective control of a room's technology; for the greatest amount of security and flexibility in the furnishings; for beauty and quality in design and workmanship.

Meeting Room Equipment

Our solution – adjustable monitors that are impressive even when they disappear without a trace. But this feature is not merely for show. It is a functionality that provides more efficiency and enhances decision making more use of space and time.

All electromotive activated models have the official TÜV GS seal.

- Choose between 15, 17, and 19 inch flat screen – or larger.
- Micro-polished and anodised aluminium.
- Frames and housing in desired colours, optional (RAL, powder coated).

- 4 mm interference anti-reflecting glass
- VGA interface for connection to all of the standard systems available on the market today
- Can be individually integrated or combined in a network

Turnstiles and tripod turnstiles by BSS offer the right solution for each and every application: tailor- made person separation.

Speed gate which complies with an increased need for safety and also for a larger volume of people.

Servo motorically driven semi height turnstile for person separation.

Tripod rotating barriers in different types for multiple applications.

Enterprise Access Solutions (formerly Bioscrypt) offers state-of-the-art physical access control and workforce management solutions that provide you unmatched confidence when choosing the right system. Be assured you are always up to date with the most current features and capabilities with our new generation of scalable and powerful devices. Whether for a single door install or large enterprise deployment, our portfolio of Fingerprint and 3D Face Biometric solutions offer many advantages and benefits.

Barrier Gates

Controlling, securing and reliable

The barrier gates guarantee trouble-free access control even with a high volume of traffic. Especially with their elegant design they ensure safe passage width of up to 10 m.

High Security Barriers

Parking Management System

We aim to maximize your business' potential and increase the satisfaction level of customers that visit your site by enhancing the efficiency of your parking facility. We utilize our experience in traffic management and systems integration to provide professional parking management & security solutions. Since we believe that each car park is unique and require customized management systems in order to achieve optimal operation, we take a systems approach in designing entries and exits, traffic flow, guidance systems, payment systems, and access management of every parking project that we handle.

- Car Park Equipment & Management Systems
- Internal & External Parking Guidance Systems
- On Street Parking Control / Parking Meters and Pay & Display System
- Automatic Number Plate Recognition
- Gate Barriers
- Electro-mechanical / Hydraulic / Manual Bollards
- Signage and Pavement Marking of Parking Areas

Our solutions can be implemented at...

- Airports
- Shopping Malls
- Banks
- Hospitals
- Schools / Universities
- Hotels
- Residential & Office Buildings
- City Garages
- Park & Ride
- Exhibition Centers & Fairs
- Arenas for Sports & Other Events
- Theaters and Cinemas
- Leisure Centers
- On Street Parking

Entries & Exits

Choose from a variety of automated technologies to register entry time and other vehicle information

- Barcode Technology –tickets
- Magnetic Stripe Technology –cards/tickets

- Transponder Technology –chipcoin/cards
- Automatic Number Plate Recognition (ANPR) System
- Radio Frequency Identification (RFID)

Central Management System

Device Control; Control and status monitoring of all the devices connected to the system.

ANPR is a technology that provides automated access on number plate contents, extracting numbers and alphabets within a fraction of a second, and converts it to a computer recognizable format.

PERIMETER SECURITY

This innovative sensor is the 5th generation of covert outdoor perimeter cable that generates an invisible radar detection field

- Up to 800 meter per sensor processor.
- Pin point target location : 1 meter accuracy
- Software segmentation separate threshold /meter of cable
- Sensor networking : power and data over cable fully secure
